

Wimgo™ Satellite Calendar

The wimgo™ Sattelite calendar allows you to have a calendar, powered by the wimgo™ database on your website. The wimgo™ Satellite is a piece of html code that is embedded on your website. You have complete control over the look and feel of your wimgo™ Satellite, so it can match the style of your website.

There are four elements to a wimgo™ Satellite:

The Calendar

Users can customize or narrow their search by clicking through the months or selecting certain weeks or days on the wimgo™ Satellite Calendar.

The Search Bar

The search bar is a wimgo™ powered search of events listed on your calendar, not the entire wimgo™ database. That way, you are specifically highlighting events on your website.

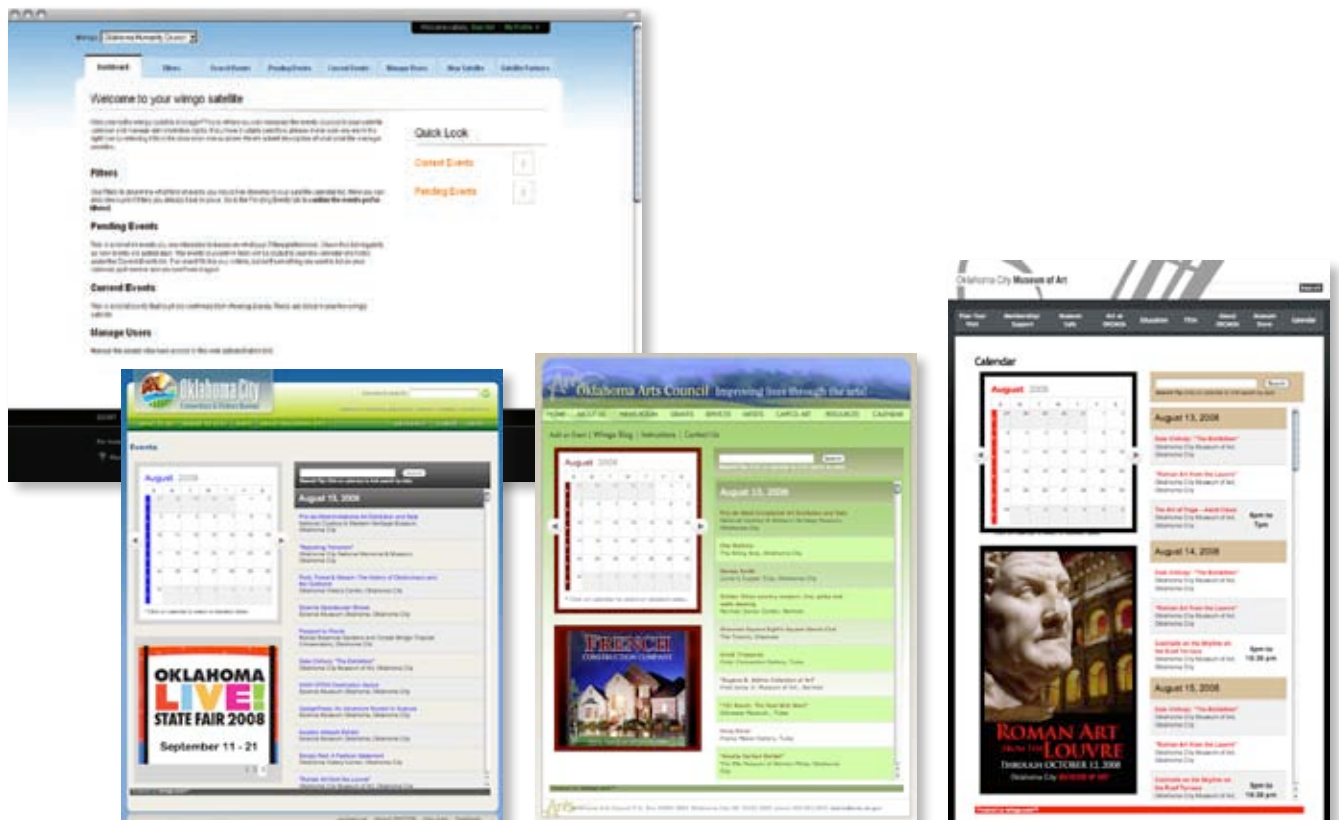

The Ad Space

There are two models for the ad space on a wimgo™ Satellite. The Free Model places an ad on your website that is populated by OPUBCO Communications Group. The Leased Model gives you the ability to utilize the ad space on your satellite to promote your events, use as a development tool or any other way you would like for a monthly fee of \$1,000.

wimgo™ Marketing Message

At the bottom of every calendar, it denotes that the calendar is powered by wimgo™.
